COURSE PROGRAM

The course offers the possibility to learn, from a direct simulated activity, the steps to complete successfully a case of zygomatic implantology, from traditional to guided surgery. The participant will learn information about materials available on the market, and the methodology of zygomatic implantology for patients with severe maxillary atrophy. All software for surgical and prosthetic planning will be presented and analyzed. During hands-on session, the participant will perform a case of zygomatic implantology on stereolithographic model based on a case study, analyzing all the steps necessary.

Speaker

Prof. Francesco Zingari

Graduation in dentistry and prosthetics at Università degli studi di Milano.
Since 2005 freelancer of the maxillofacial unit at Istituto Ortopedico Galeazzi in Milan.
